

ABSTRACT

A yarn texturing machine for processing a plurality of synthetic yarns to form a composite yarn, and which
5 comprises a plurality of processing units and a takeup unit. The processing units include at least two yarn feed units, which each withdraw a yarn from a feed yarn package. Also, at least one of the yarn feed units is
10 mounted for movement on the machine frame in such a manner that it permits selecting different yarn feed positions by adjusting the yarn feed unit on the machine frame.
